OWI105B Inductance decrease by current

OWI105B Temperature rise by current

1. Inductance tested at 0.25V. Tolerance of inductance:  $\pm 20\%$ (M)
2. DCR test temp. limits 25 °C.
3. This indicates the value of current when the inductance is 10% lower than its initial value at D.C. superposition or D.C. current.
4. To load current onto the components under normal ambience, which cause the temp. change as  $\Delta t=40^{\circ}\text{C}$  or more lower current.
5. Please refer saturated current or the minimum temperature current as standard.
